

# Working Group 2 Main Outcomes

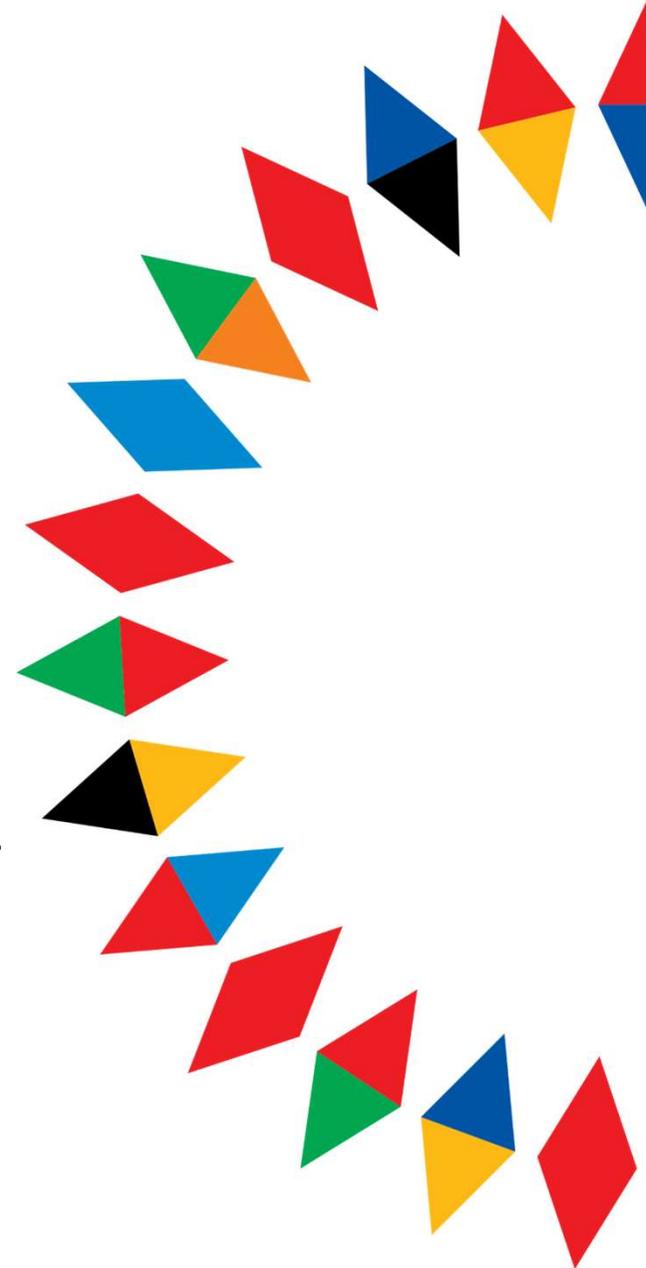

EU2022.CZ

# General information

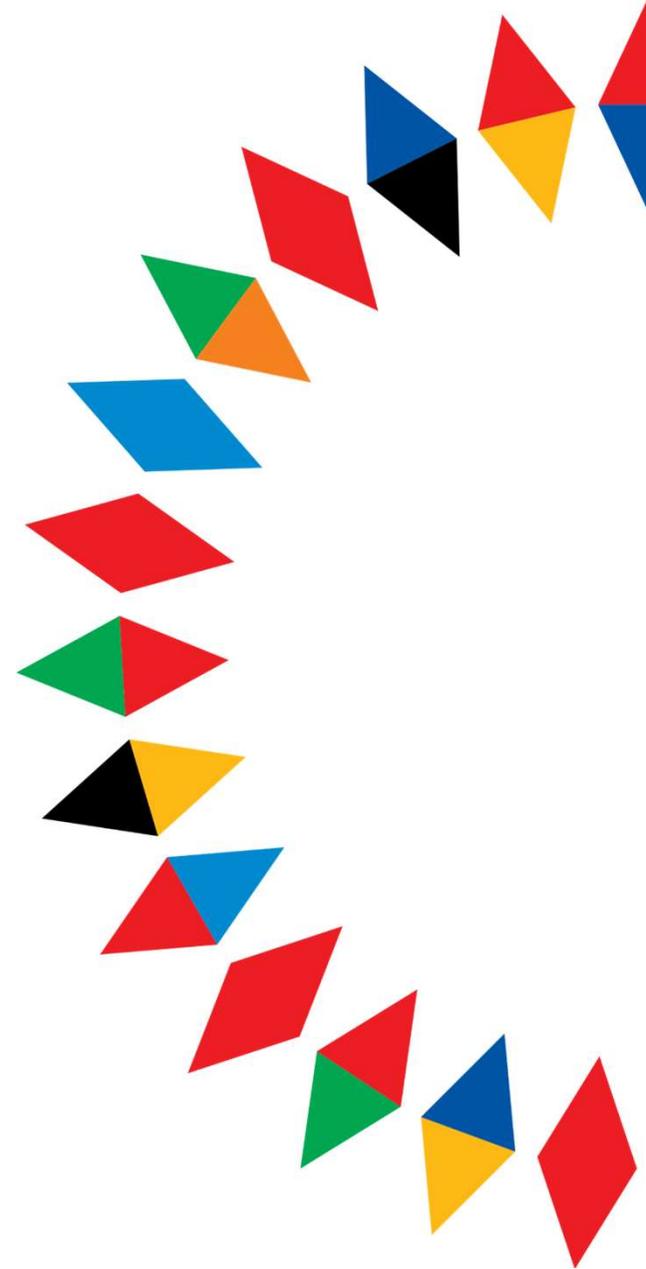

- Based on results from questionnaire the decision between participants was made to focus on three topics: **shelter capacities, emergency energy supplies** and the issue of **water availability** (drinkable, technical, fire).
- The group agreed to broaden the discussion and take into account the long-term emergencies that are not strictly related to the climate change.
- The above mentioned are beyond the boundaries of the Civil Protection.

# SHELTER CAPACITY

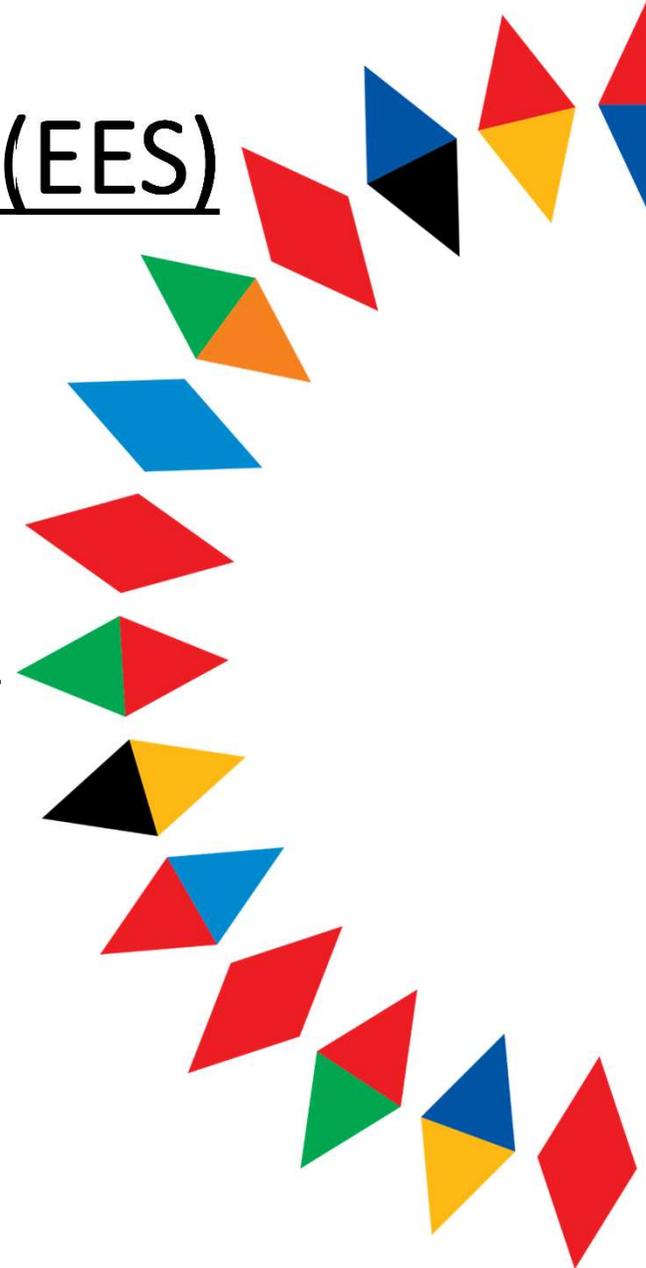

- The need of the more in-depth analysis of different type of accommodation.
- Current crisis showed that the tents/containers etc. are not preferable solution for long-term emergency.
- Participants agreed on more detailed analysis across MS which would be focused on sheltering capacities including mapping current capacities in MS.

# EMERGENCY ENERGY SUPPLY (EES)

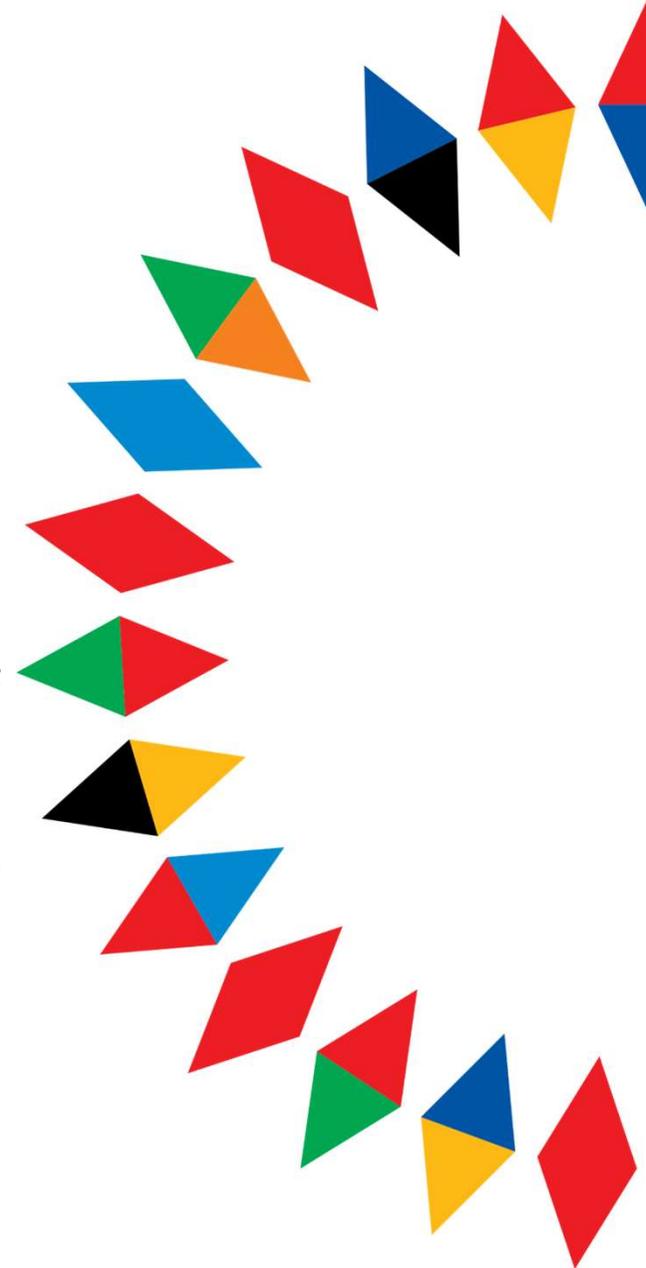

- EES is now creating under the rescEU. Nevertheless due to the UA crisis this issue wasn't discussed on the expert level.
- It is challenge for future steps in UCPM in broader consequences including using of alternative source of energy.
- EES (generators) alone are not enough – there is a need for experts and staff.

# WATER SUPPLY

- Following the discussion between participants was agreed using only two definitions – drinkable water and water resources for fire extinguishing.
- The need for more in-depth discussion about the availability of different types of water related to expected climate change in EU (drought and lack of natural sources of water).
- Questions regarding water purification are covered by national resources and UCPM.

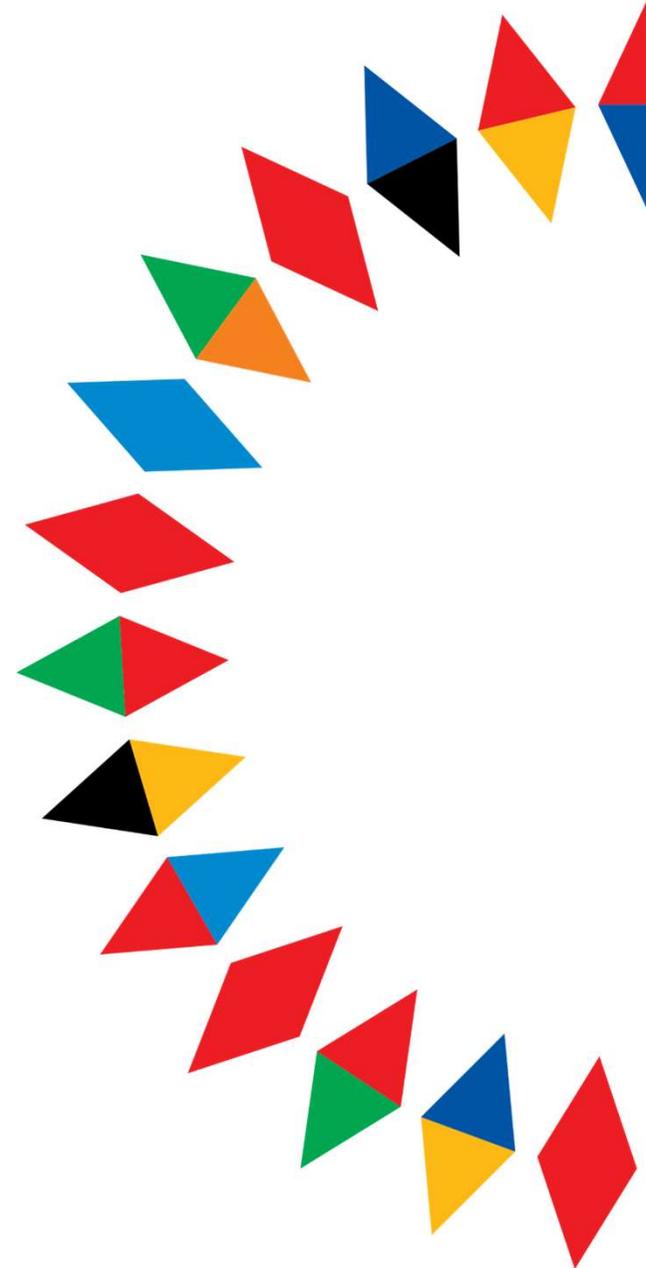

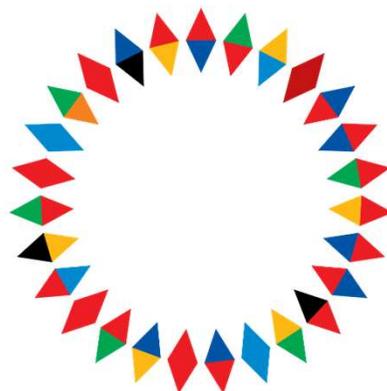

# OTHER ISSUES

- New resources needs to be based on gap analysis (risk management plan, mapping)
- Proposal to strengthen regional cooperation between MS within the framework UCPM
- Critical Infrastructure
- Emergency Medical Supplies
- Waste management
