

## coldcut™ Low Pressure Nozzle

The coldcut™ Low Pressure Nozzle when connected to the coldcut™ cobra system delivers a nozzle pressure of up to 3 bar and a water flow at the nozzle of about 58 l/min. The nozzle is designed to complement and enhance the cutting extinguishing system when fighting small fires, dampening down, washing, filling etc.

### Before use:

- loosen the protective sleeve from the hand lance and disconnect lance from hose.

### Instruction:

Fit the nozzle to the pressure tube in the same manner as fitting the lance. Note! Do not forget to lock the black ring so that the nozzle is correctly attached on the underside of the connection.

### Introduce water flow by:

**Option 1:** Remove the remote control from the hand lance. Allowing the operator of the low pressure nozzle to remotely control and activate button 3 for water.

**Option 2:** Using the water trigger on the removed mounted hand lance to control water flow.

**Option 3:** Operate the cutting extinguishing system manually from the control panel, according to standard routine.
