

## coldcut™ Pipe Cutter

The coldcut™ cobra fire extinguishing technique combines abrasive water jet cutting with water spray extinguishing.

The high water jet pressure allows for the cutting abrasive to rapidly penetrate all known construction materials, creating an efficient integrated tool with the coldcut™ cobra for high demand decommissioning and salvaging/rescue situation

With the coldcut™ Pipe Cutter accessory, you may cut pipe lines with the cobra's water jet abrasive slurry in short period of time. Virtually all diameters are possible to be cut; the time to cut depends on the thickness of the pipe.

The Pipe Cutter nozzle is propelled along dual chains applied to the pipe, powered by a hydraulic motor supplied with oil from present hydraulic system or an auxiliary hydraulic power pack supplied by Cold Cut Systems. The nozzle's abrasive slurry and speed are maneuvered by the cobra's radio control/manual control and a separate hydraulic valve control unit.
